

Connect your device.

1. Plug your Ethernet cable to your network socket.
2. Plug the Ethernet cable to the DVOX WAN Connector.
3. Plug your XLR Audio.
4. Connect your power cable.
5. Turn on your device.
6. Whitelist your device on your network.

Access your DVOX Manager Account.

Prior to the reception of your DVOX unit, an email with login credentials will be sent to you with a username and temporary password.

1. Login to <https://www.dvox.live/admin> using your credentials
2. On the side menu tab, click on the *Account* tab.
3. Click on the *Create an account* button on top right corner.
4. Fill in all the account informations.
5. Under *Permissions* choose level Tech for the account.
6. Create account.

In order to create and manage an event, you will need a tech level account.

Log off your administrator account and log back in using your tech account credentials.

Creating an event.

1. On the side menu tab, click on the *Event* tab.
2. Click on the *New Event* button on top right corner, you will be prompt to the *Event information* submenu.
3. Fill in the all required fields.
4. Click on the *Create Event* button at the bottom left corner, you will be prompt to the *Event Manager* submenu.

Setting up a stream.

1. On the top menu tab, click on the *Layout and Colors* tab.
2. On the user interface preview (on the left column) Click on the *Add group* button.
3. Click on the + sign button next to the *add stream* tab

You are now ready to pair your streams with your controller.

Pairing up a stream with your controller.

1. On the top menu tab, click on the *Input Pairing* tab.
2. On the user interface preview (on the left column) Click on the *Arrow* button next to your desired stream.
3. Find your controller serial number (on the sticker at the back of your audio acquisition device).
4. On the *Stream input Pairing* sub menu (on the right column), Click on the *Browse* button next to the DVOX Controller tab. Locate and select your controller serial number in the drop down list.
5. Click on the *Browse* button next to the input number tab. Select your desired input from the drop down list.
6. Click on the *Save Changes* button.

Final set-up.

1. Under the Event Manager menu , click on the *Visibility* button on the upper right corner and selected either Public or Private from the drop down menu.

You are now live streaming on the DVOX.live platform.

Accessing your event from your personal device.

1. Locate the direct URL of your event (next to the *Visibility* button in the Event Manager sub menu)
2. Connect to your WiFi network.
3. Using your web browser, browse to the direct URL of your event.
4. Choose your desired stream.

You are now listening to your live stream.
